Currently only 5% of all business car users have diesel cars in their fleets, although 1982 diesel sales increased by 157% over 1980 and there are clear indications that this trend will continue. If economy were the only selection criterion then this figure would surely be much higher.

The diesel revolution is now upon us and Talbot are leading the way with the new Horizon Diesel.

Based on the popular Horizon LS, the diesel features a technologically advanced 1905cc engine and leads its class in terms of economy, performance and refinement.

The life expectancy of a diesel engine is far greater than that of its petrol counterpart and logically enhances the case for extending operating life and reducing vehicle maintenance and replacement costs. The Horizon Diesel will live up to this reputation thanks to exhaustive performance and endurance testing over 500,000 miles and 100,000 hours.
