

Horizon is a very easy car to drive. Transverse mounted engine driving the front wheels makes for quick response, light steering, excellent roadholding – and it gets more out of every precious drop of fuel.

All-round visibility makes for safer roadcraft, easier parking. The well-proven Talbot Hall-effect transistorised electronic ignition ensures first time starting in cold and wet – and maintains peak engine performance between 10,000 mile major services.

Horizon is a highly equipped car and has many built in features which others regard as extras. All these are standard on the LS model. Heated rear screen. Hazard warning flashers. Rear fog lamps. Concealed inertia-reel

front safety belts. Soft rim steering wheel. Carpets.
